

Connector Drive Re-Build Project

Rigler Asphalt will be starting the first stages of construction on the Connector Drive Re-Build Project beginning on Monday, April 4.

The project will consist of completely reconstructing Connector Drive from Steinberg Drive to Cayton Road. This project will expand the width of Connector Drive to include a center turn lane and reconstruct a 12" water main.

The first stage of the project will consist of the new lane being constructed followed by the installation of the water main. Connector Drive will not be shut down at any point as crews will flag traffic around construction activities while work is taking place.

We appreciate your patience as construction progresses throughout the summer; we anticipate all work being completed by September 2016.

For more information please call (859) 647-5416.
